

# Elements of Art: Shape

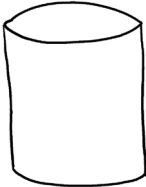

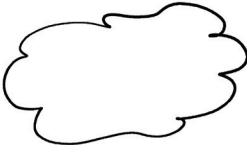

Shapes are usually made by a contour line, outline, or edge. Objects can resemble shapes in an artwork; for example, an apple can look like a circle.

There are two types of shapes:

**Geometric** shapes are mathematical shapes like circles, squares, rectangles, triangles, cubes, spheres, and cones.

**Organic** shapes are shapes from nature like leaves or flowers.

Choose a work of art and identify the shapes you see.

Geometric		Organic	
Sketch it!	Describe it!	Sketch it!	Describe it!
